

The Ultimate Guide to Copilot

What is Microsoft Copilot?

Microsoft Copilot is your personal AI companion. It's a conversational chat interface that offers a range of functionalities:

- 1. Information Retrieval:** You can ask Copilot specific questions and get answers. It's like having a knowledgeable friend at your fingertips.
- 2. Text Generation:** Copilot can generate text for you. For instance, if you need a concise summary of a memo, just ask, and Copilot will provide it.
- 3. Image Creation:** Describe what you want, and Copilot can create images based on your text prompts.
- 4. Coding Assistance:** Copilot can even write code in various programming languages, including JavaScript, C, and Python.

Keep in mind that Copilot is continually evolving, so its features and capabilities may change over time. You can access Copilot in different places:

- **Copilot Website:** Visit the Copilot website to use plug-ins, book restaurant reservations, and more.
- **Windows Sidebar:** If you're using Windows, Copilot in the sidebar allows you to change settings, summarize selected text, and perform other tasks.
- **Bing Search and Bing Mobile App:** Copilot is integrated into Bing, allowing you to switch between AI and regular search.
- **Edge Web Browser:** In Microsoft Edge, Copilot resides in the sidebar and lets you interact with text and create images.

What is the Value in Having Copilot Turned On?

Microsoft Copilot offers a variety of features that can significantly enhance your productivity and creativity. Here are some of the benefits to having Copilot turned on:

Change System Settings on Windows 11

Copilot allows you to manage system settings with simple prompts. Instead of navigating through different screens, you can ask Copilot to perform tasks like enabling “do not disturb”, adjusting volume levels, changing wallpapers, and more.

Efficient Task Execution

Copilot streamlines daily tasks, making them easier to tackle. Whether it’s composing content, summarizing information, or creating images, Copilot provides efficient solutions within the Windows 11 experience.

Imagine having an AI collaborator right alongside you as you create content, summarize information, and explore new ideas.

Copilot will be your trusted co-pilot across the Microsoft ecosystem, making your work smarter, more efficiently, and with greater innovation!

How Does Copilot Secure Data?

Microsoft Copilot for Microsoft 365 prioritizes data security and privacy. Here's how it ensures the protection of your organizational data:

1. Access Control:

Copilot connects to your organizational data through Microsoft Graph. It adheres to the same access controls as other Microsoft 365 services. This means it only accesses content that you have permission to view, ensuring unauthorized data remains off-limits.

2. Compliance Commitments:

Copilot complies with existing privacy, security, and compliance standards for Microsoft 365 commercial customers. These include the General Data Protection Regulation (GDPR) and the European Union (EU) Data Boundary.

3. No Training on User Data:

Prompts, responses, and data accessed through Microsoft Graph are not used to train foundation language models (LLMs), including those used by Copilot. Your proprietary organizational data remains confidential.

Remember, Copilot is designed to enhance productivity while respecting your data privacy.

4. Encryption:

Service-side technologies encrypt customer content both at rest and in transit. This robust encryption ensures data security throughout its lifecycle.

5. Tenant-Level Protection:

Copilot is architected to protect tenant, group, and individual data. It prioritizes safeguarding against data leakage, which is a critical concern for organizations.

6. Regulatory Compliance:

Copilot meets regulatory requirements, providing peace of mind for organizations. It aligns with privacy laws and data residency commitments.

7. Transparent Evolution:

As Copilot evolves, it continues to uphold these security and privacy principles. Regular updates ensure it remains a trusted AI companion.

Copilot Security Best Practices

When it comes to securing your data while using Microsoft Copilot for Microsoft 365, there are several best practices to follow:

Risk Assessment

Copilot's reach extends beyond the core apps. It will integrate with Microsoft Viva, Power Platform, and other productivity tools, shaping the future of work and enabling you to achieve more.

Permissions Cleanup and Policy Enforcement

Regularly review and clean up permissions. Ensure that users have just-enough-access permissions—only the necessary access required for their roles. Enforce policies to maintain data security and prevent unauthorized access.

Maintain Security Measures

Continuously monitor and maintain your security measures. Regularly update policies, review access controls, and stay informed about security best practices. This proactive approach helps safeguard your data effectively.

Remember, these practices contribute to a more secure experience with Microsoft Copilot, enhancing your data protection and privacy!

What O365 Tools Will Copilot Integrate With?

Microsoft Copilot for Microsoft 365 seamlessly integrates with several essential Office 365 tools, enhancing your productivity and creativity. Here's a breakdown of the integration:

1

Word, Excel, PowerPoint, Outlook, Teams, and More

Copilot works alongside popular Microsoft 365 Apps, including:

- **Word:** Enhance your document creation and editing.
- **Excel:** Get intelligent assistance with spreadsheets.
- **PowerPoint:** Elevate your presentation design.
- **Outlook:** Optimize email composition and management.
- **Teams:** Collaborate effectively within Teams.
- And more! Copilot is your co-pilot across these familiar apps, unlocking creativity and productivity.

2

OneDrive Integration

Having a OneDrive account is essential for features within Copilot. It enables saving and sharing files seamlessly.

What O365 Tools Will Copilot Integrate With?

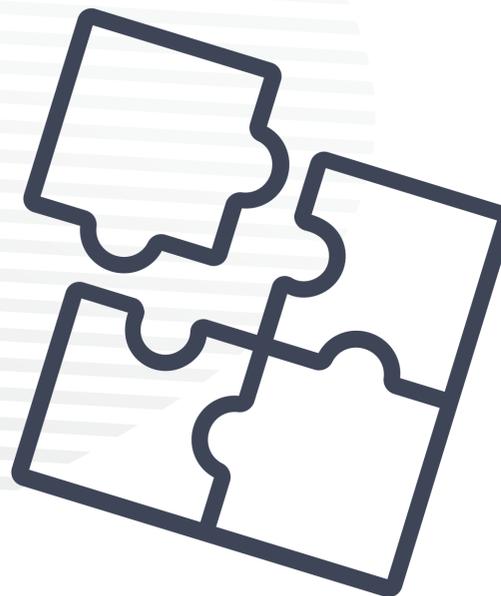

New Outlook for Windows

For seamless integration with Outlook, use the new Outlook for Windows, currently in preview. You can also switch to Outlook Mobile to access the new experience.

Microsoft Loop and Whiteboard

Copilot integrates with Microsoft Loop and Microsoft Whiteboard. Ensure these are enabled for your tenant to leverage Copilot's capabilities.

What O365 Tools Will Copilot Integrate With?

Foundational capabilities of Copilot

Natural Language Understanding (NLU)

Copilot can understand and generate human-like responses in multiple languages. It comprehends context, interprets user intent, and provides relevant information.

Content Generation

Copilot can create imaginative content such as poems, stories, code, essays, songs, and more. All you need to do is give it a simple prompt and it handles the rest.

Information Retrieval

Copilot can search the web using Bing and provide relevant information. Whether it's facts, summaries, or answers to specific questions, Copilot has you covered.

Structured Responses

Copilot can organize information into tables, lists, and markdown formatting for readability. It's like having a helpful assistant who knows how to present data effectively.

Error Detection and Correction

Copilot can identify errors in conversations and rectify them. If it makes a mistake, it simply apologizes and provides accurate data based on the parameters of your original prompt.

Image Description

If you upload an image, Copilot can describe its contents. Simply send an image to Copilot and it will provide an accurate, detailed description.

What O365 Tools Will Copilot Integrate With?

Copilot web grounding refers to the process by which Copilot gathers information from the web to enhance its responses. When you ask a question or provide a prompt, Copilot can search the internet using Bing and retrieve relevant information. This helps ensure that the answers provided are accurate, up-to-date, and well-informed.

Copilot's commercial data protection ensures the safety and privacy of workplace AI-powered web chats. Here's how it works:

1

Authentication and Authorization

- Users access Copilot using their work or school (Entra ID) account.
- Tenant and user information is removed from chat data at the start of a session.
- Search queries triggered by Entra ID users are not linked to specific individuals or organizations.
- Microsoft doesn't retain prompts or responses from Entra ID users.

2

Data Encryption

- Chat data sent to and from Copilot is encrypted in transit (TLS 1.2+) and at rest (AES-128) during the chat session.
- Microsoft has no 'eyes-on' access to this data.

What O365 Tools Will Copilot Integrate With?

3

No Training Data

- Because prompts and responses aren't retained, they can't be used for training the underlying large language model.

4

Non-Targeted Advertising

- Advertising shown to Entra ID users isn't based on workplace identity or chat history.

These data protections extend to eligible Entra ID user chats in Copilot across various platforms, including copilot.microsoft.com, Bing, Edge, and Windows. Additionally, Copilot doesn't retain chat history or offer usage reporting when commercial data protection is enabled. Remember, Copilot is grounded in data from the public web (Bing search index) and doesn't have access to organizational resources within Microsoft 365, such as documents or emails.
